

Check Content Availability

Feature Specification

FEATURE OVERVIEW

An extension has been added to the **Check content availability** feature to suggest what packages or content titles might be missing from the product definition. This is to allow the user to quickly identify the required packages or content titles when content is not available for certain activities.

FEATURE USE

The **Check content availability** feature of a product checks if there is content available for every activity referenced in the product. The scope of the check includes any activities found in objectives or those required for assessments. The results are shown at the end of the product definition page.

Content availability	
Number of objectives	6
Number of assessments	6
Number of activities	147
Number of activities with content	143
Number of activities without content	4
Number of activities missing content	0

If the status of an activity is **Not found**, then a list of base packages will now be provided that includes the missing content. A message is shown indicating the number of possible packages.

Objective / Assessment	Activity	Status
Objective 1	Lesson 1	Not found 1 possible package
Objective 1	Lesson 2	Not found 3 possible packages

This message can be toggled for each activity to see the package names, and the associated content title if it exists. These can then be manually added to the product if appropriate.

Not found	
3 possible packages	
Package	Content title
Package Name 1	Content Title 1
Package Name 2	Content Title 2
Package Name 3
