Locate Student

Available in Release 3.3

FEATURE OVERVIEW
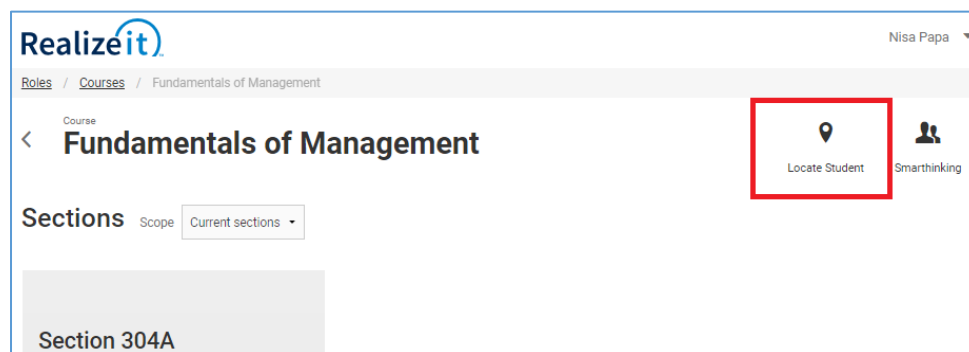

The **Locate student** feature provides a mechanism for locating which group a student is involved in, and then accessing the group.

FEATURE USE

The Instructor UI groupings page has been updated with the **Locate student** functionality.

Clicking on **Locate Student** will provide a search function that can operate on the student's username, first name or surname.

The student (or a number of students meeting the search criteria) will be returned in a list. Clicking on the student will show the group the student is enrolled in as part of this product. The instructor can then select the group.
