

# Product Dashboard

Available in Release 3.3

## FEATURE OVERVIEW

---

The **Product dashboard** is a new area for course developers to create and manage products in Realizeit. This provides a quick and easy way to create a product, create a version, and refresh a version. It displays recently used and favorite products, as well as products that have been searched for. The page displays 10 at a time, with each product displayed as its own tile. Information such as when each product was last refreshed is easily visible from this dashboard.

## FEATURE USE

---

From any area of the system, the course developer can access the **Product dashboard** by selecting the **Workflow dashboard** icon in the top right-hand corner of the screen, as illustrated in Figure 2.

Figure 2 Workflow Dashboard icon

The **Product dashboard** can also be configured as the default landing page for the course developer when they enter the system. To do this, select the course developer's personal profile, select **Edit settings**, select **Workflow as Default start location**, and select **Save settings**. Now, when the user logs in, they will be directed straight to the **Product dashboard**.

By default, the **Product dashboard** displays the products the course developer has used most recently. However, the course developer can ensure that certain products remain on the **Product dashboard** by marking them as favorites. This is done by selecting the icon highlighted in Figure 3. The user can also search for an existing product to edit or pin.

## CREATING A PRODUCT

A product can be created by selecting the **Create product** button. When selected, a pop-up appears (as illustrated in Figure 4) with a variety of options for use in product creation. The basic options include product name, and creating a curriculum along with the product. Advanced options are available by selecting the **More** button.

## CREATING A VERSION OF A PRODUCT

Each product tile on the dashboard displays the versions of that product that have been created. If more than two exist, a **Show all** button will be available to see all versions, as illustrated in Figure 5.

Versions				
Fundamentals of Management (DO_01)				
3 versions				
Version	Created	Last updated	Last refreshed	Num students
<a href="#">2018 Fall</a>	15/06/2018 12:40	15/06/2018 12:40	15/06/2018 12:40	
<a href="#">2018 Summer</a>	15/06/2018 11:37	15/06/2018 11:47	15/06/2018 11:47	
<a href="#">2018 Spring</a>	15/06/2018 11:36	15/06/2018 11:36	15/06/2018 11:36	

Figure 5 **Versions** pop-up displaying the versions associated with a product

The course developer can create a version of a product directly from the **Product dashboard**. Each product tile has a **Create version** button, as highlighted in Figure 6. When selected, a **Create version** pop-up appears with various options.

## REFRESHING VERSION FROM BASE PRODUCT

Each product version has a **Refresh** button next to it, which the course developer can use to refresh the version from base. When this button is selected pop-up appears to confirm the action, as illustrated in Figure 7. If **Refresh** is selected, the version will be refreshed from base.

## ACCESSING CONTENT VALIDATION AND SEARCH FOR A PRODUCT

The course developer can access **Content validation and search** for a product from the **Product dashboard**. Each product tile has a **More** button that provides access to the feature.
