Color blind visual impairment

User Guide

CONTENTS

FEATURE OVERVIEW

A new "Visual impairment" setting has been introduced for "Color only". This will not prevent matching, ordering or point/click questions from being delivered. Other characteristics of the visual impairment setting will still apply.

DETAILS

A user who indicates a visual impairment in their personal settings can now further refine this to indicate that the impairment is color blindness only.

The available settings are visible in Figure 1.

Figure 1 Visual impairment settings.

When the *Color only* setting is selected the following question types will be available for delivery to the user:

- matching questions
- ordering questions
- point/click questions

LEARNER EXPERIENCE

Selecting the *Color only* setting has the effect of allowing questions involving drag and drop or clicking to be delivered to the learner.

Figure 2 shows a student with this setting receiving an ordering question.

This is an **ordering** question. Here a student has to arrange the objects shown on screen in an appropriate order.

For the following countries, arrange them in descending order by total land area.

	United States	Brazil		China
		Canada	Russia
